

Extract id value from
css class to javascript
variable

**ASSIGN
BUSTER**

I have a ul menu from which I want to retrieve certain information

- *Maths & times*

I have a function in javascript:

```
function getSessionDatas(){
    var sessions = [];
    $(''. rightDiv'). each(function( index ) {
        var session = $. trim($(this). text(). slice(0,-1)). split("x");
        var sessionData = [];
        for (var i = 0; i < session. length; i++) {
            var s = {subjectOrder: i, subjectID: subs[session[i]]};
            sessionData. push(s);
        }
        var ses = {sessionNo: index, sessionData: sessionData};
        sessions. push(ses);
    });
}
```

Here:

```
var s = {subjectOrder: i, subjectID: };
```

I want to assign the subject id according to the class of the

- item, in this case in the class there is an id10. How can i assign the subjectID to 10 in this case?
