

Deforestation doing more good than bad

[Business](#)

Have you ever had an animal make it's home under your porch? You parents tried every technique to get it out, with no luck.

They finally had to call someone to do it for them. In some ways that was humans fault, it's not always our fault 100% of the time. But most of the time. It's all because of deforestation we cut down trees so we can have more space to build bigger better homes. But what are the animals that already live there suppose to do? Well that's when they have to find homes so they move into people's area's.

We do more harm than good, when we cut down trees such as cause more greenhouse gaseses, causes animals to move into human environment and it causes animal discretion and habitat loss. This is why I think deforestation should be illegal. A greenhouse gas is “ absorbing in a gas that contributes to the greenhouse effect by frared radiation, e. g., carbon dioxide and chlorofluorocarbons” if we cut down the trees it's like cutting down the filters that take the stuff that's bad out of the air.

Like i said in my first paragraph it causes lots of animals to move into our environment. And that causes problems for us because they can chew on wires or make the house smell just all different types of things. Deforestation also can cause habitat loss, by cutting down the forest it cuts down places for animals to hide, take shelter, get off of the ground and be in camouflage to hunt. So yes i feel that deforestation should be illegal for theses reasons. It causes greenhouse gases, animal decision and habitat loss. So the next time you hear about a local forest getting cut down and you hear something under your porch you know why.
