Discussion Questions

9. Inherent risk is the risk of a material misstatement in the financial statements arising due to error or omission as a result of factors other than the failure of controls. Residual risk is the probability of loss that remains after internal control has been implemented. TeamRisk is an advanced risk assessment system that enables internal auditors to develop a risk-based internal audit plan. By applying TeamRisk, CPI could have a more

comprehensive assessment with the advanced self-assessment features of Teamrisk.

10. The Global Organizational Hierarchy divided company's audit structure into logical, manageable units. The hierarchy is different from organization to organization, and consists of subsidiaries, divisions, units, activities and even more specific small units. The hierarchy is more flexible and personalized to fit in different organization. The COSO ERM framework is a strong foundation for Hierarchy. Through COSO model, company could easily detect, understand, assess, and fix uncertainties.
