

Intro to computer science chapter 5and6

**ASSIGN
BUSTER**

The . mobi TLD used by sites that are optimized for mobile devices. True

The world-wide database of domain names corresponding IP addresses is called the Domain Name System. True

Servers that host part of the Domain Name System are called domain name servers, or DNS servers. True

File-sharing sites like Youtube and Flickr let you post and share photos, music, and other media. True

Sites that let you access your email account from public computers like the ones in the library are called file-sharing sites. False

Some sites on the internet have the same IP address. False

banner ad An advertisement that is typically embedded at the top of a Web page.

animation Displaying a sequence of still images to create illusion of motion

helper application Software that you need to download , such as an add-on, a plug-in , or a player.

vector Graphics that uses mathematical formulas instead of pixels and maintain the same quality on all screens.

script A series of program instructions embedded directly into HTML code for a web page , used to make a Web page interactive.

Web Master This person can manually submit a URL to a search engine.

meta keywords These are descriptive data and words entered into the header section of a Web page when it's created.

hits A search engine returns a list of these, which are links to Web Pages that match your search criteria.

search sites A Web site like [www. google. com](http://www.google.com) that is designed specifically to help you find information on the Web.

search engine A Web crawler, an indexer, a database, and a query processor are all components of this.

Dictionary. com Example of Web app referred to as online reference software.

cloud, online Words that refer to storage on the Internet.

One Drive A host site that provides Microsoft Office Web apps and cloud storage.

productivity apps Web apps help you accomplish specific tasks such as creating a document or presentation.

Google Earth A mapping application that might require you to download additional software.

Private browsing Mode for surfing the Web without leaving history, temporary Internet files, or cookies.

pharming Hacking a server to re-route traffic to a fake Web site to obtain your personal information.

historyThe list of Web pages your browser maintains of Web visits during a specific period of time.

microbrowserUsed to access Web pages on your mobile computing device, and specially designed for small screens.

cookieSmall text file that a Web page stores on your computer to identify you.

World Wide WebA collection of millions of Websites.

Web siteA collection of related Web pages connected by hyperlinks.

MosaicThe first graphical Web Browser released in 1993.

Web PageA Hypertext Markup language (HTML) document.

Text messagingAnother term for Short Message Service(SMS), messages less than 160 characters sent via cellular network.

virus protectionSoftware that scans incoming messages and programs to protect your computer.

disk defragmenterReorganizes the data on a magnetic hard drive so that you can access files more quickly.

adwareDisplays unsolicited advertisements in banners or pop-up windows.

Recycle BinNot emptying this lets files remain on your computer and take up space.

disk cleanup utility Removes unused files like temporary internet files from your hard drive.

sleeves Used to store DVD backup discs to protect from scratches and dirt.

paper Store this in a dry area, humidity can cause it to stick and then jam during printing.

solid state Drivers that have no moving parts and are less likely to be damaged by dirt and impact, but still cared for.

alcohol and water Cleaning product specifically meant for computer screens.

memory cards Stored in their cases when not in digital cameras.

air Keep a can of compressed ___ near your work area, and use it to clean dust off your keyboard or pointing device.

power You can avoid data loss by installing an uninterruptible _____ supply (UPS) to prevent power loss to your computer in the event of a power outage.

surge suppressor To prevent power fluctuations from damaging electronic components, you should always use a _____ with your computer.

magnets _____ will affect the data on older storage technology such as floppy disks, but are no danger to newer systems that use solid-state technology.

cool Because electronics need to stay _____ computers have built-in systems to keep computers from overheating.

Desktop Computer Computing hardware that is not very portable, but highly functional, perhaps used by a graphic designer creating a logo using complex graphics software, printer, and digital camera add-ons.

Operating system Platform that coordinates the functions of various hardware components and determines the types and brands of application software you can use.

Peripheral Devices that can be attached to a computer to extend the computer's functionality, such as adding printing or video capabilities.

Laptop Computing devices that is highly functional and portable, likely to be used by a traveling salesperson who constantly needs to update a database after client visits.

Convertible computers Device with a detachable keyboard that can convert to a tablet for mobility.

Your computer should be password protected. True

With cloud storage, you can retrieve your data anytime from anywhere in the world. True

Firewalls inspect data transmitted between a computer and external recipients to prevent unsolicited data exchanges. True

There is no way to track your smartphone once it is lost. False

A thief must physically steal your computer to gain access to its files and data. False

Your best protection against losing your data is to backup your files to your hard drive. False

Make sure the paper tray has paper before sending documents to print. DO

Use compressed air to remove dust and other particles from your keyboard. DO

Check to see that your computer and devices are plugged in. DO

Run the Optimize Drivers feature to maximize free space on your hard drive. DO

Call a technician right away if your computer doesn't start. DON'T

Turn off your router or modem before connecting to the Internet. DON'T
