

Developmental psych
final. psychosocial
development,
adolescent
egocentrism, late...

theorist who coined the term adolescent egocentrism Elkind Ron thinks he is more unique and admired than other adolescents his age, and is certain that everyone is paying attention to his every action. It appears that he has started to experience adolescent egocentrism Many adolescents feel that their own thoughts and experiences are far more extraordinary than those of other people. This is part of their personal fable Piaget called the reasoning that characterizes adolescence formal operational thought One of the most prominent aspects of formal operational thought is the ability to think in terms of possibilities The mistaken belief that if money, time, or effort that cannot be recovered has already been invested in some endeavor, more should be invested in an effort to reach the goal is called sunk cost fallacy Richie just spent \$1,000 fixing his car even though the mechanic told him the car will continue to need expensive repairs that may total more than the vehicle is worth. Richie is likely experiencing the sunk cost fallacy The notion that two networks exist within the human brain, one for emotional and one for analytical processing of stimuli, is called dual-process model Albert et al. (2013) ran a series of experiments in which adults and adolescents, alone or with peers, played a video game. In the game, taking risks could lead to crashes or gaining points. The experiments found that _____, unlike the _____, were much more likely to take risks and crash when they were _____. adolescents, adults, with peers Many developmentalists find middle schools to be "developmentally regressive," which means learning goes backwards The common middle-school schedule that involves students changing rooms, teachers, and classmates every 40 minutes creates a developmental mismatch between students' needs and the school context.

During puberty, adolescents' thoughts center on _____. themselves thinking
<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

intensely about themselves and about what others think about them is called egocentrism. The belief that one cannot be harmed by things that would hurt someone else is referred to as the invincibility fable. The power of the invincibility fable may be observed in young military recruits who hope to be sent into combat. Jeremy is 7 years old and has been asked to balance a scale with weights that can be hooked to the arms of the scale. Jeremy will probably put weights on both sides without considering distance from the center of the scale. Reasoning that includes propositions and possibilities that may not reflect reality defines hypothetical thought. Justine is 14 years old. Her parents are frequently annoyed because Justine tends to ask critical questions such as, "Why can't I have wine with dinner? You do," or "I don't understand why I'll be able to vote when I'm 18, but I have to wait until I'm 21 to buy alcohol!" This demonstrates Justine's inductive reasoning. All Christians believe in the Bible, and Josiah is a Christian; therefore Josiah believes in the Bible. This is an example of deductive reasoning. _____ is a term that refers to the ability to begin with specifics, such as accumulated facts, and then make general conclusions? inductive reasoning. Psychosocial development during adolescence involves the search for an understanding of oneself. Psychosocial development during adolescence is often seen as a quest to answer the question "Who am I?" According to Erikson, adolescents are in the stage of identity versus role confusion. Mary is an adolescent. According to Erikson, her new identity will be established by choosing to embrace some parental and societal values while abandoning others. Identity diffusion is typically characterized by no focus or concern about the future. Which adolescent appears to be experiencing identity diffusion?

Zachary, who spends most of his time watching TV and hanging out with
<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

friends. When a person adopts parents' or society's roles and values without questioning and exploring a personal identity, it is referred to as identity foreclosure. An example of a behavior that demonstrates identity foreclosure is working in the family business because it is expected. The term for a pause in identity formation, when alternatives are explored before final choices are made, is known as a moratorium. During an identity moratorium, adolescents typically take on a temporary role and postpone identity-achievement decisions. According to Erikson, what is one of the four aspects of identity? political ____ adolescents totally reject the religion in which they've grown up. Few. In the United States, parent-child conflict is most common when children are in early adolescence. Some parent-child bickering during the adolescent years may indicate a healthy family. Which type of parenting is most effective during adolescence? Authoritative. Isaac and Derek persuaded Robert to cut school and steal alcohol from a store. Isaac and Derek provided _____ to Robert. Deviancy training. At age 17, Gage aspired to become a serious musician. His group of friends began to change as he grew closer to students with deep musical interests, and he drifted away from other friends who were more engaged in sports. This illustrates peer selection. Abstinence-only sex-education programs that were federal policy in the United States until 2009 _____ the adolescents' engagement in sexual activity. had no impact on. In general, as children experience puberty, their self-esteem declines. The cultural norm of familism often requires family members to make sacrifices for the good of the whole. When compared with earlier thinking, thinking in adulthood is all of the following EXCEPT more concrete. A possible fifth stage of cognitive development that characterizes adult thinking is postformal thinking. On his <https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

own time, Ron looked over his course syllabi for the term and realized that, in three weeks, he had three assignments due on one day. Ron decided he would do one assignment per week for the next three weeks so that he would have them all done by their due dates. Ron is demonstrating _____ thinking.

As more is understood about brain development after adolescence, it seems that the characteristics of postformal thought are evident as the brain and, in particular, as the _____ matures.

A common logical error of emerging adults is delay discounting, the tendency to undervalue events in the future. A research study of people aged 13 to 45 found that logical skills improved from _____ to _____ then stayed steady, but social understanding continued to advance.

adolescence; early adulthood

In one U. S. study, researchers asked adolescents and adults to describe themselves. Without knowing the participants' ages, coders classified the descriptions as: protective (high in self-involvement, low in self-doubt), dysregulated (fragmented, overwhelmed by emotions or problems), complex (valuing openness and independence above all), and integrated (able to regulate emotions and logic). No one under age 20 was in the _____ stage.

complex

Thought that arises from personal experiences and perceptions is subjective.

Traditional models of formal operational thinking value _____ thought and devalue _____ thought.

objective; subjective

All of the following beliefs reflect cognitive flexibility EXCEPT life plans are static.

Although Dr. Johnson believes that women and men can perform equally well on a math test, Dr. Johnson is exploring if women perform worse on a math test when they are asked to indicate their gender prior to taking the test. Dr. Johnson is exploring the concept of stereotype threat.

A proposition or statement of belief is a thesis.

Dr. Barnes

tells his student Charlotte that she should pursue a career that will make her happy. She responds, " Not all careers that will make me happy will provide me with enough income to live." Charlotte's response was

antithesis Herman and Todd, two friends, are discussing logos on T-shirts. Herman says that everyone should be able to wear whatever logos they want on their T-shirts. Todd suggests that some logos may be offensive and thus shouldn't be worn. If Herman is able to integrate those two ideas, he will have created a synthesis in dialectical thought, a ___ implies a ___ and the integration of these occurs within the _____. thesis; antithesis; synthesis

Geraldine is a medical intern who believes that all people deserve access to medical care, but she also knows that throughout her career she will have to make decisions about which patients will receive a scarce, life-saving medication. Reconciling these two thoughts requires dialectical

thinking Which college student is most likely to experience shifts in moral reasoning? Jed, who is taking a philosophy course During emerging adulthood, religious service attendance becomes _____ frequent and the development of religious convictions become _____ frequent less; more

Which factor is likely to be most influential with respect to Greta's views on divorce? Her

culture Research indicates that the process of moral thinking improves with age Erikson's fifth stage of development is identity versus role confusion.

Personality traits present at age 18 never disappear at age 18 During

emerging adulthood, self-esteem and happiness _____ for most

people increase Which statement about personality in emerging adulthood is

TRUE Personality can change after adolescence With respect to personality,

emerging adults typically become _____ self-centered and _____ caring

toward others. less; more According to Erikson, once an emerging adult has

<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

established a sense of identity, he or she needs to resolve which crisis?

intimacy versus isolation According to Erikson, the stage of intimacy versus isolation reflects the desire to share one's life with someone else. Intimacy is the desire for social connection. Friends _____ mental health and _____ physical health. strengthen; strengthen Friendships reach their peak of functional significance during emerging adulthood. Dr. Anderson is studying the frequency of cross-sex friendships. Dr. Anderson has found that cross-sex friendships are common. When heterosexual couples are romantically committed to each other they tend to have _____ cross-sex friendships. fewer. In a class analysis, Robert Sternberg (1988) described three distinct aspects of love that give rise to seven different forms of love. The aspects include all of the following EXCEPT challenge. An intense physical, cognitive, and emotional experience characterized by excitement, ecstasy, and euphoria is associated with passion. Knowing someone well, and sharing secrets as well as physical attention in a reciprocal nature, is consistent with which aspect of love? intimacy. Dixie just started dating BJ. Dixie feels happy and excited when she thinks about BJ, and knows BJ feels the same about her. That said, she is not sure where the relationship will lead, as they both continue to live independent lives. According to Sternberg, what form of love does Dixie appear to be experiencing? infatuation. The Western ideal is _____ love. consummate. An arrangement in which a couple lives together in a committed romantic relationship but are not formally married is referred to as cohabitation. Research has found that cohabitation prior to marriage increases the likelihood of divorce. Which age group is most likely to be victims and perpetrators of domestic abuse? emerging adults. The term g refers to _____ intelligence. general. Dr. Fine was interested in assessing the “
<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

g," or general intelligence, of college students so he assessed abilities in all of the following areas EXCEPT agility. A problem with cross-sectional research is that there could be cohort effects as each has unique life experiences. The Flynn effect refers to a rise in average IQ over generations. The Flynn effect is MOST likely due to changes in electronic media. Dr. Green is studying intellectual development in adulthood. In order to generate the most accurate view of intellectual development, Dr. Green should use a _____ research design. cross-sequential. The research design that involves testing groups of subjects of different ages multiple times and comparing their scores with their own scores in previous periods in addition to the scores of new groups of adults of the same ages is called cross-sequential research. Schaie's cross-sequential research on intellectual development demonstrated that individuals improve in most mental abilities during adulthood. The basic intelligence that makes learning quick and thorough is referred to as _____ intelligence. fluid. Which is the best example of fluid intelligence? The ability to quickly recognize relationships between words. Intelligence that reflects accumulated learning is referred to as crystallized intelligence. Which example relies MOST heavily on crystallized intelligence? knowing the chemical symbols for various elements. Paula is a middle-aged doctor who is an expert at laser eye surgery for the correction of myopia (nearsightedness). She graduated from medical school 35 years ago. Daryl is a young doctor who also does the surgery; he graduated from medical school 5 years ago. According to the textbook, who would likely be the better choice for operating on your eyes? Paula; she has done the operation so often that she is more strategic and flexible. Which statement about age and expertise is TRUE? Expertise can overcome some of the

<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

detrimental effects of age but not all. The benefits of _____ intelligence in adult life are obvious, as adults need to solve real-world challenges.

analytic Over the long run, _____ intelligence is prized whenever life circumstances change or new challenges arise.

crystallized With which coping style do people try to attack a stressor in some way? Problem-focused

In which coping style do people try to change their attitude about a stressor? emotion-focused

Baltes and Baltes found that adults use their intellectual strengths to offset their age-related declining abilities through the process of selective optimization with compensation

Which is the BEST example of an adult using selective optimization with compensation? Giovanni, who always buys and drives a standard transmission vehicle so he won't forget how to do so

The theorist who proposed the idea that individuals continue to develop into adulthood

Erikson Although Erikson's stages of psychosocial development are sequential, the search for identity that begins in the stage of identity versus role confusion ends with the stage of intimacy versus isolation

How many stages of development did Abraham Maslow describe? 5

Which is NOT one of the Big Five personality traits? selflessness

Davetta is very organized and self-disciplined. She conforms easily to standards set for her performance at work. She is high on which of the Big Five traits? conscientiousness

People choose a particular lifestyle and social context, or _____, because it is compatible with their personality traits.

ecological niche

Which of the following has not been associated with adult personality? Geography

An acquaintance who is not a friend but still has an impact on an adult's life is called a(n) consequential stranger

How has the Internet impacted friendships and relationships with consequential strangers? It has strengthened friendships and increased the number of consequential

<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

strangers. A study of 7, 578 adults in seven nations found that physical separation between parents and adult children strengthen the relationships between parents and adult children. After nearly 20 years with his company, Mike's job was outscored. He wants his new job to offer not only a good wage but also job satisfaction and a sense of accomplishment. He is focused on the _____ of work. intrinsic rewards. After a recent divorce, Cheryl is entering the workforce after many years off. As a single parent with three children, she needs a livable wage, good benefits, and a retirement plan. She is focused on the _____ of work. extrinsic rewards. Individuals who are accepted into a family that is not their legal or biological family are called fictive kin. A long-term committed partnership correlates with health and happiness throughout adulthood and late adulthood. For most people, then, _____ is the crucial aspect of love in a partnership. commitment. After children have grown, MOST couples find that their relationships improve. One of the MOST influential factors in divorce is whether it is a first or subsequent marriage. According to Erikson, when individuals are productive in an unselfish and caring way, they are demonstrating generativity. The primary form that generativity takes is _____ establishing and guiding the next generation. Emily is her family's kinkeeper. This means that she assumes responsibility for gathering the family for holidays and disseminating info. According to research, which statement about the " sandwich generation" is TRUE? Many adults do not feel burdened by their responsibilities. As he ages, a professional musician begins to limit his repertoire, to practice more before concerts, and to change the way he sits when he plays. He is using selective optimization with compensation. _____ theories claim that social forces limit individual choice and direct life, especially in late adulthood. Stratification. The <https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

theory that is contrary to disengagement theory is _____ theory

Activity

Which of the following is NOT characteristic of typical elder volunteers?

married to a volunteer

Marietta babysits two days a week for her school-age grandchildren, and regularly gives her neighbor, who can no longer drive, a ride to the grocery store and doctor appointments. She also frequently sends small amounts of money to her daughter, who has just returned to college.

Which of the following statements about Marietta's activities is NOT true?

Marietta would be better off volunteering with an organization, as to really help others, she needs more structure to her activities

Generally, where do the elderly prefer to live? In their own homes

Claire and Dennis have lived in the same house for over 40 years. They reared their children there and were actively involved in the neighborhood. As they age, their children want them to move to a nearby small apartment. Like many other older adults, Claire and Dennis prefer to age in place

When many adults who moved into a neighborhood decades earlier never leave the area, the result is a naturally occurring retirement community (NORC)

Religious faith is associated with improved psychological health in old age because of beliefs that give meaning for life and death

In what way are older Americans the LEAST politically active? volunteering on political campaigns

Which of the following happens to the brain during senescence? neurotransmitter production decreases

How does high-SES correlate with brain senescence? High-SES have better medical care

Which of the following is most affected by brain shrinkage? multitasking

The ability to hold info in memory for a moment before evaluating, calculating, and inferring its significance is known as working memory

Edna, age 71, has excellent pronunciation but poor spelling. She frequently forgets the word or phrase she is trying to use,

<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

telling others that it is “on the tip of her tongue.” These characteristics may be the result of inadequate control processes. Nelma is a healthy 70-year-old who would like to learn to play video games with her grandson. According to research on learning late in life, which of the following is most likely TRUE? Nelma could learn to play games if she starts at the easiest level and practices regularly. A study of extraordinary creative people found that in their 70s-90s, they remained as focused, efficient, and committed as they had been earlier. Dorothy started keeping a detailed journal that includes stories of her childhood and early adulthood. She plans to pass her journal down to her grandchildren as a family history and so that they can know her in a more intimate way. Her journal writing is a form of life review. A challenge faced by researchers who want to see if wisdom increases with age is the definition of wisdom varies by culture. The ability to recall a string of digits backward tends to _____ with age, while memory for vocabulary tends to _____ with age. _____ decrease; same. One function of working memory is temporary storage of info for conscious use. The idea that cognition should be measured in terms of everyday tasks and circumstances is ecological validity. Storage mechanisms, retrieval strategies, selective attention, and problem solving are all considered control processes. For the average individual in late adulthood, traditional tests of intelligence demonstrate that cognitive abilities decline. Dementia is the pathological loss of brain functioning. According to the most recent DSM (DSM-5), the appropriate term for the pathological loss of brain functioning is dementia. Autopsies show that the brains of Alzheimer victims have a proliferation of plaques and tangles. Vascular dementia is caused by insufficient supply of blood to the brain. One infectious disease that can produce dementia is AIDS. _____ is a common condition because many

<https://assignbuster.com/developmental-psych-final-psychosocial-development-adolescent-egocentrism-late-adulthood/>

elderly people take many different prescription drugs. Polypharmacy
Self theories emphasize perceptions of self
Erikson called the final crisis of development
integrity versus despair
According to Erikson, each new experience throughout life requires both assimilation and accommodation.
Which of the following responses to weakening leg muscles in an older person is the best response in terms of maintaining self-efficacy? using a walker and minimizing movement decreases risks. Which of the following is a sign of a humane setting for long-term care? individual choice in activities
Assisted living can be thought of as a combo of nursing home and independent living
Compared to single older adults, elderly spouses tend to be happier and wealthier
Most studies of marriages of long duration find that compared to younger adults, the elderly are happier in their marriages
The style of grandparenting that is the most common in the US is the _____ style
companionate
The difference between ADLs and IADLs is that IADLs require some intellectual competence
