

Impact of emerging technologies (ict)

**ASSIGN
BUSTER**

Artificial intelligence Where computer systems are created to behave like humans

Eg. Game playing , robotics, languages

Example of artificial intelligence Game playing

Robotics

Languages

Impacts of artificial intelligence Bon everyday life Safer transport

Increased leaguer time

Improved medical care

Biometrics Part of a persons but do is used for identification

Examples of biometrics Fingerprint

Eye recognition

Face recognition

Voice recognitions

Impacts of biometrics on everyday life Better security

Robotics Where robots are used to perform wide range physical tasks

Tasks of robotics Dangerous jobs

Moving h any objects

Explore extreme environments

Types of robots Manufacturing

Carried

Domestic

Exploration

Impacts of robotics on everyday lifeIncreased leisure time

Lord of jobs

Safer working environment

Quantum cryptographyAllows messages and data to be sent privately

Use complex maths and secure data using physics

Impacts of quantum encryption on everyday lifeCompletely secure voting

Secure communications

Secure bank transfers

Secure personal info

Computer assisted translationsWhere a human translator uses computer software to help translate

Examples of CATspell check

Translation

3D and holographic imagingImages made to appear 3 dimension and have depth

Impacts of 3D imaging on everyday lifeImproved security (credit card)

Better movie experience

Virtual realityWhere Computers used to create artificial environment that users can interact with

Equipment for Virtual reality
Eye goggles

Special gloves

Headphones

Impacts of Vr on everyday life
Improved medical surgeons

Training

More realistic education
