Capacity output for the company's 32 nanometer (NM) and NM nodes, which denote industry benchmarks for some of the fastest microprocessors in the industry, grew 40 per cent year-on-year.

" We will keep driving very hard. This is the first year we have proven we have the right strategy. There are lots of changes happening, significant

changes. Better dynamics are evolving and structures are changing. " said Mr.

Jam. The opening of the \$ban Greenfield fabrication plant in New York that went online earlier this year, and which joined the company's two other facilities in Singapore ND Germany, has helped to push sales.

Plans to open an ABA Dhabi fabrication plant are still on hold, with no clear time frame for when construction will begin. Plans originally were for the plant to be completed by 2015. " We continue to investigate on the ground. If Gloriousness continues the way it has, we will reassess our plans," said Mr.

Jam. Attic is wholly owned by Umbrella Development, a strategic investment company owned by the ABA Dhabi Government, and was founded to diversify the emirate's economy and create jobs. Attic founded Gloriousness with the US-based semiconductor company MAD in 2009.

Earlier this year, Attic bought out Mad's shares in Gloriousness, while Umbrella still retains a 19.4 per cent stake in MAD.

MAD continues to be Salaciousness's biggest customer, although the industry group ICC Insights predicts a 17 per cent decline in revenues this year for the firm. Intel is the world's biggest chip manufacturer, followed by Samsung. Both, however, are believed to have suffered falling sales. ICC Insights forecasts a 2 per cent decline in sales for the global semiconductor industry this year.
