Inside the Mind of a Psychopath

Thearticle to be discussedhereinis titled inside themind of a psychopath authored by Kent and Joshua (2010). Thearticlederives a typical study on Neuroscientists who are makingthediscovery on cold-bloodedkillerssuffering from a brainabnormality. Theauthor alludes thatthetermpsychopathintrigues up movieimages of brutalincomprehensibleviolence's anddrawsparticularanalogies of peoplewhohavethismentalproblem in prisons. These peopletend to lack some elements in life such as empathy and are incapacity to engage in vices that are awful without regrets. Psychopathscover their deficiencies and would take extra effort and time before discovering such characters. This people show appearances of normalcy even with guilt inside of themosterraticandirresponsibleactions and sometimes would turnviolentanddestructive. Kent (2010) believesthatnearlyeveryculture on earth has individuals who seant is ocial behavior poses a threat to thecommunities' peace. Hementionsthat by thehelp of technology, thebrainactivities of such characters can be captured and an investigationcarried on what is happening inside them. Thisarticle, therefore, analysisthetraits of psychopathsandhowtheyreact to theworld around them. In relation to this subject, it is evident that far from being selfish, psychopathssuffer from a biological defectand their brainstend to processinformationdifferently. In therealsense, psychopathsexist in reallifeand Newman believesthatthey are un-reactive andhavenormalphysiological responses to unpleasantstimuli. In as much as they may look appealing, theyhavethecapacity to tone-deaf,

https://assignbuster.com/inside-the-mind-of-a-psychopath/

becausetheylackaccess to their ownfeelingsandthose of others. Tentatively,

lagree with theauthor of thisarticle since thepsychopaths '
experiencetheworld in his or her owncontext from otherpeople.

Theyhaveissues upon issuesmakingappropriatemoraljudgments on valuesandputtingbreaks through their impulses. Theyalsohaveissues on how to deal with emotions, especiallyfearandhavetroubleidentifyingfearful facial expressions. According to Kent, theseindividualsfeelirritatedwhenthingsdo not work their wayandturn to riskybehaviors to fulfillthedesires of their hearts.

It is essentially interesting to

discoverthatpsychopathshavetroubleunderstandingmetaphorsand are morelikely to judge negatively otherphrases than others are. According to Kiehl,

psychopathsmakemoreerrorswhenidentifyingabstractnounsandhavelapses in howtheypayattention. Howeverinterestingthis may sound, there are also some confusing elements about this set of people. As stated in this article, the psychopaths get offended very quickly and are more violent than others. They are also to a higher extent susceptible to committing new crimes on release from prison. Kierlobserves that a recent study indicated that the expense of prosecuting and in carcerating psychopaths. When combined with the cost of the havo ccaused in wrecking others' lives would amount to \$250 billion to \$400 billion a year.

In relation to thisarticle, it would be of importanceforme to subjectively dwell in studying the brain structures of this people and understand why they go through these issues. Kiehl alludes that one or two brain is always not enough to produce the profound impairments of psychopaths. By this, it is of importance to study their brain structures and understand how this people arrive https://assignbuster.com/inside-the-mind-of-a-psychopath/

at the decisions they make. Rather than allowing the machines and technology to detect the actions of this people, it is important for a careful study to be held in order to establish the cause of this brain damages and corrective measures that can be deployed. Psychopath sjust like anyother human being shave the right to have proper treatment and for this to be achieved, a careful study of their behaviors and their thought patterns should be analyzed.

Through scans that havebeencarried by scientists, thediscovery has beenmadethatpurports to thefactthatthesignificant impairments that affecttheability of thispeople to feelemotionstakesplace in their brains. It is analyzed that this people neverlearn from their mistakes and even though some people believe this disorder is untreatable, there is hope. There is no properreas on to reject this people and seclude them when appropriate measures can be deployed to manage their situations. In a nutshell, this people's brains process information differently and it would look like they have learning the disability that also impairs their emotional development. Dwelling in this would lead to greater findings that would facilitate the safety of communities in which these people live. An ewtreatment method has been enacted to help juvenile of fenders with psychopathic tendencies to get care.

In as much as scientistscontinue to ascertainbrainmalfunctions of psychopaths, it is important or a society to aid in the bringing of sanity in their places since it makes no sense to ignore this people when they pose threats to the society. It is important to live with this people in harmony and avoid issues that would trigger their violence. As Kent and Kiehlputit, the psychopaths are not appalling people, the only thing that https://assignbuster.com/inside-the-mind-of-a-psychopath/

makes them different is thebrainabnormality that sets them in a worldthatbarelyunderstands them.
